10. Synthetic Testing Notes

The following notes are included as a ground-truth checklist for evaluating whether the VisaPrep engine correctly identifies relevant preparation areas without inventing facts.

1	The applicant is self-funding the trip but will stay with a cousin for five nights.
2	The current job began about ten months before the planned trip, after more than six years with the previous employer.
3	There was a prior B1/B2 refusal in 2022 under section 214(b).
4	The stated trip combines a professional forum with tourism.
5	Hotel dates cover only the Houston portion; the Dallas stay is with the U.S. contact.
6	The applicant has international travel history and returned to Nigeria after each trip.

Expected behavior: The engine should summarize the application in second-person language, identify the prior refusal, mixed business/tourism purpose, recent employment transition, self-funding and cousin accommodation, and ask grounded preparation questions. It should not predict visa approval or refusal.
